

Flashing GB ROM and Kernel From Eclair JF6 With or Without GB Bootloaders

Thanks to XDA member [Cezar](#) supplying packages.

A) Download a ROM from XDA [Captive Development Section](#) and place it in the root of your SD card before flashing any ROM's or kernels.

B) If you are already running Gingerbread bootloaders skip to step "**L**" if not then continue to step "**C**".

C) Download the Odin bootloader package below and place it on your PC.

- [I897UCKF1-bootloaders.zip](#)

D) Turn on phones USB debugging.

- Settings/Applications/Development/USB Debugging

E) Power down phone and remove your sim card and external sdcard from you phone.

F) Enter your phone into Download Mode by using one of the methods below.

- [Download Mode Jig](#)
- Vol UP + Vol Down + USB insert = Download

G) Open the OneClickI897UCKF1-bootloaders.exe on your PC and run as administrator.

H) Plug USB cable into phone and PC. **Note: Yellow com port will light up.**

I) Press START, and it only takes a few seconds to install.

J) Once installed phone will boot into stock blue recovery, select [reboot system now] from menu.

K) After phone boots its safe to remove your USB cord and close the One-Click. Congrats you now have GB bootloaders!

L) Download the Odin kernel flasher below and place it on your PC.

- [Odin3v1.85.zip](#)

M) Download a .tar kernel file from [Captive Development Section](#) for the ROM your installing. **Note: I9000 is for I9000 based ROM and I897 is for I987 based, its very important you select the correct one.**

N) Open the kernel flasher Odin3 v1.85.exe and run as administrator.

O) Add your chosen .tar kernel to the PDA box and uncheck auto reboot.

P) Turn on phones USB debugging.

- Settings/Applications/Development/USB Debugging

- O)** Power down phone. Enter your phone into Download Mode by using one of the methods below.
- [Download Mode Jig](#)
 - Vol UP + Vol Down + USB insert = Download
